Results from the Beta Pictoris b Hill Sphere Transit Campaign

M. Kenworthy¹, S. Mellon², K. Zwintz³, T. Guillot⁴, J. Wang⁵, R. Stuik¹, E. Mamajek^{6,2}, E.J. De Mooij⁷, L. Abe⁴, D. Mékarnia⁴, P. Kalas⁵, I. Laginja⁸, S. Crawford⁸, K. Stevenson⁸, M. Ireland⁹, N. Suntzeff¹⁰, S. Lacour¹¹, F. Kiefer¹¹, A. Lecavelier des Etangs¹¹, A. Vidal-Madjar¹¹, Z. Hui¹², L. Wang¹², A. Lagrange¹³, M. Nowak¹³, P.A. Wilson¹⁴, B.B. Lomberg¹⁵ and the BRITE Science Team

(1) Leiden Observatory, The Netherlands; (2) University of Rochester, USA; (3) Universität Innsbruck, Austria; (4) Université Côte d'Azur, France; (5) California Institute of Technology, USA; (6) Jet Propulsion Laboratory, California Institute of Technology, USA; (7) Dublin City University, Ireland; (8) STScI, USA; (9) Australian National University, Australia; (10) Texas A&M University, USA; (11) LESIA, Paris Observatory, France; (12) Key Laboratory of Modern Astronomy and Astrophysics, China; (13) Institut de Planétologie et d'Astrophysique de Grenoble, France; (14) University of Warwick, UK; (15) University of Cape Town

322.06 at ESS IV

International campaign with bRing (Kenworthy 2017, Stuik+ 2017), BRITE (Zwintz+ 2018), ASTEP (Abe+ 2013), AST3-II (Zhang Hui+ 2019), HST (PI: Wang and Kalas) with over 24,000 photometric observations.
Spectroscopic monitoring covering Hill sphere transit (see de Mooij poster)
